EXEMPLARY CLAIM:	1	
NUMBER OF DRAWINGS:	1 Drawing Page(s)	
LINE COUNT:	857	

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates to photostable compositions that provide protection from ultraviolet radiation ("UVR"). The invention particularly relates to the **sunscreens** avobenzene, octocrylene and oxybenzone, forming a triplet **sunscreen** combination. Compositions of the present invention are generally substantially free of substantial amounts of other **sunscreens**. The triplet combination surprisingly provides and substantially maintains the initial **SPF** value of the **sunscreen** composition throughout the period of **UVR** exposure. Compositions of the invention are photostable such that each of **sunscreen** active in the triplet combination does not appreciably photodegrade. The present invention accurately communicates the amount of **UVR** photoprotection actually provided in natural sunlight and minimizes the amount of potential harmful free radicals formed as byproducts of photodegradation.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB This invention relates to **methods**, pharmaceutical compositions and kits useful in treating conditions responsive to estrogen by the administration of estrogen agonists/antagonists. Conditions responsive to the compositions and **methods** include rheumatoid arthritis, colon cancer, tissue wounds, skin wrinkles and cataracts. The compositions are comprised of an estrogen agonist/antagonist and a pharmaceutically acceptable vehicle, carrier or diluent. The

10/779,314

compositions and **methods** of treatment are effective while substantially reducing the concomitant liability of adverse effects associated with estrogen administration.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

NUMBER OF CLAIMS: 10  
EXEMPLARY CLAIM: 1  
NUMBER OF DRAWINGS: 4 Drawing Page(s)  
LINE COUNT: 551  
CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The invention relates to a new **method** for determination of realistic **UV** protection factors or broad spectrum indices of a **sunscreen** preparation. Realistic **UV** protection factors are calculable by determination of the theoretical and the experimental **UV** absorbances of known **UV** filters in wavelength steps of about 5 nm in the range of 290-400 nm from a definite basic formulation (emulsion, gel etc.) and on a transparent **substrate** and introducing of the values in a mathematical model. These factors are in conformity with values measured in vivo. The number of the experiments for developing new formulations are significant reduced because only basic formulation, kind and concentration of the filters have to enter.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates to the use of creatine compounds such as, for example, creatine, creatine phosphate or analogs of creatine, such as creatine-pyruvate, creatine-ascorbate, cyclocreatine, 3 guanidinopropionic acid, guanidinoacetate, homocyclocreatine, guanidino benzoates as energy generating systems and antioxidants for preservation of skin against adverse aging effects and damage secondary to insults such as harmful sun radiations, stress and fatigue. The creatine compounds which can be used in the present **method** include (1) creatine, creatine phosphate and analogs of these compounds which can act as **substrates** or **substrate** analogs for creatine kinase; (2) molecules that mimic the biological activity of creatine (3) molecules that modulate the creatine kinase system.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Cosmetic and cosmeceutical compositions which enhance repair of damage caused to human DNA caused by excessive exposure to sunlight or to other radiation causing such damage. The active ingredients are a synergistic combination of nor-dihydroguaiaretic acid (NDGA) and niacinamide. Optional components are propyl gallate or other antioxidants. Composition may further contain sun-screen additives.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB This invention relates to compositions, compounds and **methods** for lightening skin, using active compounds having the structure: ##STR1## wherein: (i) each X is, independently, selected from the group consisting of halo, alkyl, substituted alkyl, aryl, OR, OCOR, COR, CONRR, COOR, CN, SR, SOR, SO.sub.2 R, SO.sub.3 R and NRR, wherein X is other than hydroxy, amino and thio, if this X is attached ortho to the phenol hydroxy;

(ii) m is an integer from 0 to 4;

(iii) each R' and each R" is, independently, selected from the group consisting of hydrogen, halo, alkyl, substituted alkyl, aryl, OR, OCOR, OCRROR, COR, CR(OR)OR, CONRR, COOR, CRROR, CN, SR, and NRR; wherein halo, when it appears, is other than geminal to a hydroxy, NH.sub.2, or SH;

(iv) R'" is alkyl or substituted alkyl; wherein when R'" is present, wherein when R'" is present and R' is also hydrogen, R" is other than hydrogen, hydroxy, halo, thio, cyano and amino;

(v) each R is, independently, selected from the group consisting of hydrogen, alkyl, substituted alkyl and aryl;

(vi) n is an integer from 1 to about 5, wherein at least one carbon in (C)<sub>n</sub> has other than alkyl or hydroxy as a substituent and (C)<sub>n</sub> adjacent to Z has other than amino, SH, CN or hydroxy as R';

(vii) Z is selected from the group consisting of O, NR, S, SO, SO.sub.2, PO.sub.2 R and POR;

(viii) wherein any carbon, when disubstituted, having as one substituent selected from the group consisting of hydroxy, amino, cyano and thiol, has the other substituent selected from the group consisting of hydrogen, alkyl, and aryl, whether this substituent is R' or R";

and to pharmaceutically acceptable salts of these compounds, stereoisomers and enantiomers thereof free from or mixed with other enantiomers or stereoisomers; and such compounds in compositions with a pharmaceutically-acceptable carrier thereof comprising a safe and effective amount of a subject skin lightening active.

AB Provisions are made so that an **SPF** value having high

correlation with an in vivo **SPF** value can be calculated in **vitro** using a common calculation equation regardless of the material type used. Transmitted **UV** intensities  $I(\lambda)$  are corrected by respective erythema effectiveness coefficients  $EE(\lambda)$  to calculate an erythema-inducing **UV** intensity **EUI**, and the elements of  $I(\lambda)$  from  $\lambda=320$  to  $400$  nm are summed to calculate a transmitted **UV-A** intensity; then, from the ratio **UV-A/EUI**, a theoretical value  $\alpha_{\text{sub.TH}}$  is calculated for the base  $\alpha$  of a photoaugmentative effectiveness  $\alpha_{\text{sup}}$ . **UVA**, an ultimate theoretical value  $EUI_{\text{sub.UL}}$  of **EUI** is calculated. When  $EUI_{\text{sub.UL}}$  is larger than 75, the **SPF** value is calculated from  $1350/EUI_{\text{sub.UL}}$ ; otherwise, the **SPF** value is calculated using an empirical equation.

AB A composition for tonical application to human skin to provide protection from excessive exposure to ultra-violet rays, comprises:

a. an effective amount of ultrafine titanium dioxide as an inorganic **sunscreen**;

b. an effective amount of octyl methoxycinnamate as an organic **sunscreen**; and

c. a cosmetically acceptable vehicle for the **sunscreens**;

the weight concentration of the titanium dioxide and octyl methoxycinnamate being within the region designated A in the accompanying drawing.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.
